

Rain Barrels available to all residents

Given the success of the rain barrel program in the Long Lake neighborhood, we are now offering, in conjunction with the Clean Lakes Committee, rain barrels to all residents. At a discounted price of \$45 each, these 55 gallon barrels are an efficient way to capture stormwater runoff and use it for watering lawns and gardens. To install, simply connect your gutter downspout to the barrel and the runoff from your roof will be collected, which saves the water for other uses and helps stem nonpoint pollution. The barrels are terra-cotta colored; however, you can paint them to match the color of your house if you wish. They have two types of covers: a solid cover, which can be cut out, and one with a screen to keep out insects. The barrels have a spigot at the bottom that can attach to a garden hose. Additional barrels can be connected in a series. An overflow valve at the top allows excess water to be redirected away from your house.

Detailed installation instructions are available on our homepage.

For more information or to request a barrel, please contact Savas Danos directly at (978) 486-3104.
