

Weather Advisory:

Preventing Frozen Water Pipes

Due to the extremely cold temperatures, the Littleton Water Department reminds our customers of the potential for the freezing of water lines and interior plumbing, and offers the following guidance:

- Please take time to verify that temperatures in basements are warm enough to prevent freezing of water lines.
- If you are concerned about freezing of plumbing, simply running a faucet at a trickle can help to prevent this from occurring.
- Freezing typically occurs at night while water is not in use.
- Contact the Littleton Water Department if you experience a freeze up at 978-540-2222.
